AcroSeal packaging is the industry-leading packaging for air and moisture sensitive reagents, designed to deliver the best performance among the comparable packagings in the marketplace.

The innovative quadrant style screw cap with the specially designed septum provides:

- **Convenience:** large surface area with easy access to large amount of products.
- **Quality:** the specially designed multi-layer septum ensures better re-seal.
- **Performance:** reduces the rate of moisture uptake compared to the competitive packaging.
- **Safety:** minimizes the potential needle puncture-related incidents

Replacement AcroSeal Septum

Now offering replacement septa to further prolong the life of your AcroSeal packaged products.

- Teflon coated (one side) butyl rubber septum (red) **Cat. No. 434560100**
- Teflon coated (both sides) silicon septum (gray) **Cat. No. 434570100**

Features

- **Easy to choose:** select a like-colored septum or refer to www.acros.com
- **Easy to replace:** unscrew the cap assembly under inert atmosphere, replace the used septum with the new one and tighten the cap. Refer to Page 15 for more detailed instruction

Product Range:

We offer a wide range of solvents in three different grades with moisture content of less than 50ppm at the time of packing.

- **Standard Grade:** Suitable for most of the applications.
- **Supreme Grade:** Filtered through 0.2 micro filters for dust-free applications.

Deuterated Solvents:

We offer some of the most commonly used deuterated solvents in AcroSeal packaging. It is a low cost alternative to ampule packaging. AcroSeal packaging reduces the moisture uptake of the solvent compared to the regular packaging. It also reduces the safety risk associated with handling ampules.

Additional products packaged in AcroSeal packaging

1) Organometallics: Products offered include organolithium, organotin, organozinc and organoaluminum compounds, and Grignard reagents in two pack sizes, 100mL and 800mL.

2) Reagents in Solution: We offer some of the most commonly used reactive reagents and corrosive gaseous reagents in the ready to use solutions in AcroSeal packaging. It reduces the hazard of handling and improves the safety of using the products. Key products include boranes, hydrides, organic bases and Lewis acids.

3) Organics: Organic products packed in AcroSeal packaging include those which are prone to oxidation and hydrolysis, as well those which have strong odors or high toxicity.

HOW TO PROPERLY USE THE ACROSEAL SYSTEM

How to select the right needle

- Use a clean and dry 18-24 gauge needle

How to properly puncture the septum

- Ensure the proper personal protective equipment is used
- Always carry out in an inert atmosphere
- Never puncture through the same spot

How to withdraw a large amount of material: the cap design allows the user to easily access larger quantities of material.

- Place the entire bottle in a glove box, and establish an inert atmosphere
- Unscrew the gray closure (this will require some force)
- Remove the desired amount of the material from the bottle
- Screw the gray closure onto the bottle. Tighten it until the gap between the bottle and the bottom of the gray closure is roughly 1/8 inch (or 3mm).
- Tilt bottle and check for leaks

How to store the product after use

- Replace the red cap and tighten it by hand
- Store according to the recommendation on the product label.
- Store in an upright position

HOW TO REPLACE THE SEPTUM

Selection of the septum

- Select the appropriate septum from the two options below:
 - Teflon/silicon/Teflon (gray) – product number 434570100
 - Butyl rubber/Teflon (red) – product number 434560100

Removal of the septum

- Place the bottle and the replacement septum in a glove box, and establish an inert atmosphere
- Remove the gray closure (this will require some force)
- Unscrew the red over-cap from the gray closure
- Carefully support the body of the gray closure and slowly press out the septum from the top.

Installation of a new septum:

- Carefully insert the new septum into the gray closure
 - For the butyl rubber/Teflon septum, ensure the gray (Teflon) side is facing the reagent when closed
 - For the Teflon/Silicon/Teflon, either side is okay
- Use a blunt object to firmly run around the circumference of the septum until it is properly seated
- Screw the gray closure onto the bottle and tighten until the gap between the bottle and the bottom of the gray closure is roughly 1/8 inch (or 3mm).
- Tilt bottle and check for leaks

Although the AcroSeal septum is designed to re-seal after puncturing with a needle, for best performance, it is advised to never puncture through the same spot twice.
